PREDICT. REASON. PREVENT.

See the disruption early

Evidence-linked supply intelligence with human-controlled action

Detect

Supplier delay received

Incident linked to orders

Compare

Three scenarios scored

Assumptions adjustable

Control

Manager approval gate

Sandbox execution only

CAUSENTRA AI

THE PROBLEM

Disconnected records

A retailer needs one path from supplier risk to customer impact.

The incident retains source record IDs for inspection and audit.

CAUSENTRA AI

WORKING SCENARIO

8 units at risk

Seven-day moving average: 8 units per day over a three-day horizon.

24 units

Forecast demand

Observed range: 21-27

16 units

Available inventory

Receipt delayed to day 5

8 units

Projected shortfall

Scenario estimate only

CAUSENTRA AI

DECISION LAB

Compare interventions

Scores include projected exposure, added cost, and delayed-order penalty.

Wait

8-unit shortfall

$500 order exposure

No added cost

Prioritize

8-unit shortfall

$300 order exposure

No added cost

Expedite

8 units supplied

$60 added cost

No delayed orders

CAUSENTRA AI

CONTROL PLANE

Approval before action

Analysts propose. A separate manager approves. Execution is simulated.

Analyst

- Inspect evidence and scenarios
- Create a pending proposal
- Cannot approve own action

Manager

- Approve or reject proposal
- Execute in sandbox
- Review receipt and audit log

CAUSENTRA AI

EVIDENCE AND LIMITS

Working prototype

Dockerized FastAPI app, public source, and a repeatable synthetic demo.

Verified

16 automated tests passing

Container and HTTP flow tested

Seven-case rules baseline

Pending access

AMD adapter implemented

Token Factory key unavailable

Live model trace not claimed
